Waldorf community Association management company introduces electronic board meetings

Waldorf, MD August 04, 2010 – Meredith Management, LLC, AAMC, one of only approximately 100 certified management companies in the United States, and the only certified management company in the Southern Maryland Region introduces a greener way to meet - electronic Board of Directors meetings.

Meredith Management continues with their going green campaign, first launched at the beginning of 2009, as they hold their first electronic board meeting on Thursday, August 5, 2010. According to Megan C. Quinn, Meredith's Vice President, "Many of our directors work in Washington, D.C. and have difficulty making it to the meetings. Our clients have asked for innovative solutions and we are proud to be offering Online Meetings. Of course, online meetings will never replace personal networking and face-to-face interaction and may not be the right choice for all of our clients. This is; however, the best option available for association directors who are working hard to save time and money while increasing productivity."

Through electronic board meetings Meredith plans to reduce travel costs for its employees and directors, increase productivity with efficient time management and collaboration capabilities, increase credibility based on the advanced interaction with clients and increase attendance at meetings while generating better communication between homeowners and directors.

American commuters consume 2.9 billion gallons of fuel per year idling in rush hour traffic. Transportation is one of the foremost contributors to greenhouse gas emissions and rising corporate expenditures. But with meetings held online, Meredith and its participating clients plan to prevent CO² from entering the atmosphere. It's a win-win situation for the climate, the client, and the company.
